

Machinist

Perform all bench and machine operations to make, rework, and repair precision machined parts for tooling, facilities, experimental and other requirements. Set up, operate and adjust a variety of precision machines such as lathes, grinders, shapers, and milling machines. Determine method and sequence of work operations and devise and develop tools and fixtures to complete work assignments. Assemble, fit, test, and check precision machined parts and assemblies to specified operational, test and quality requirements.
